

Introduction

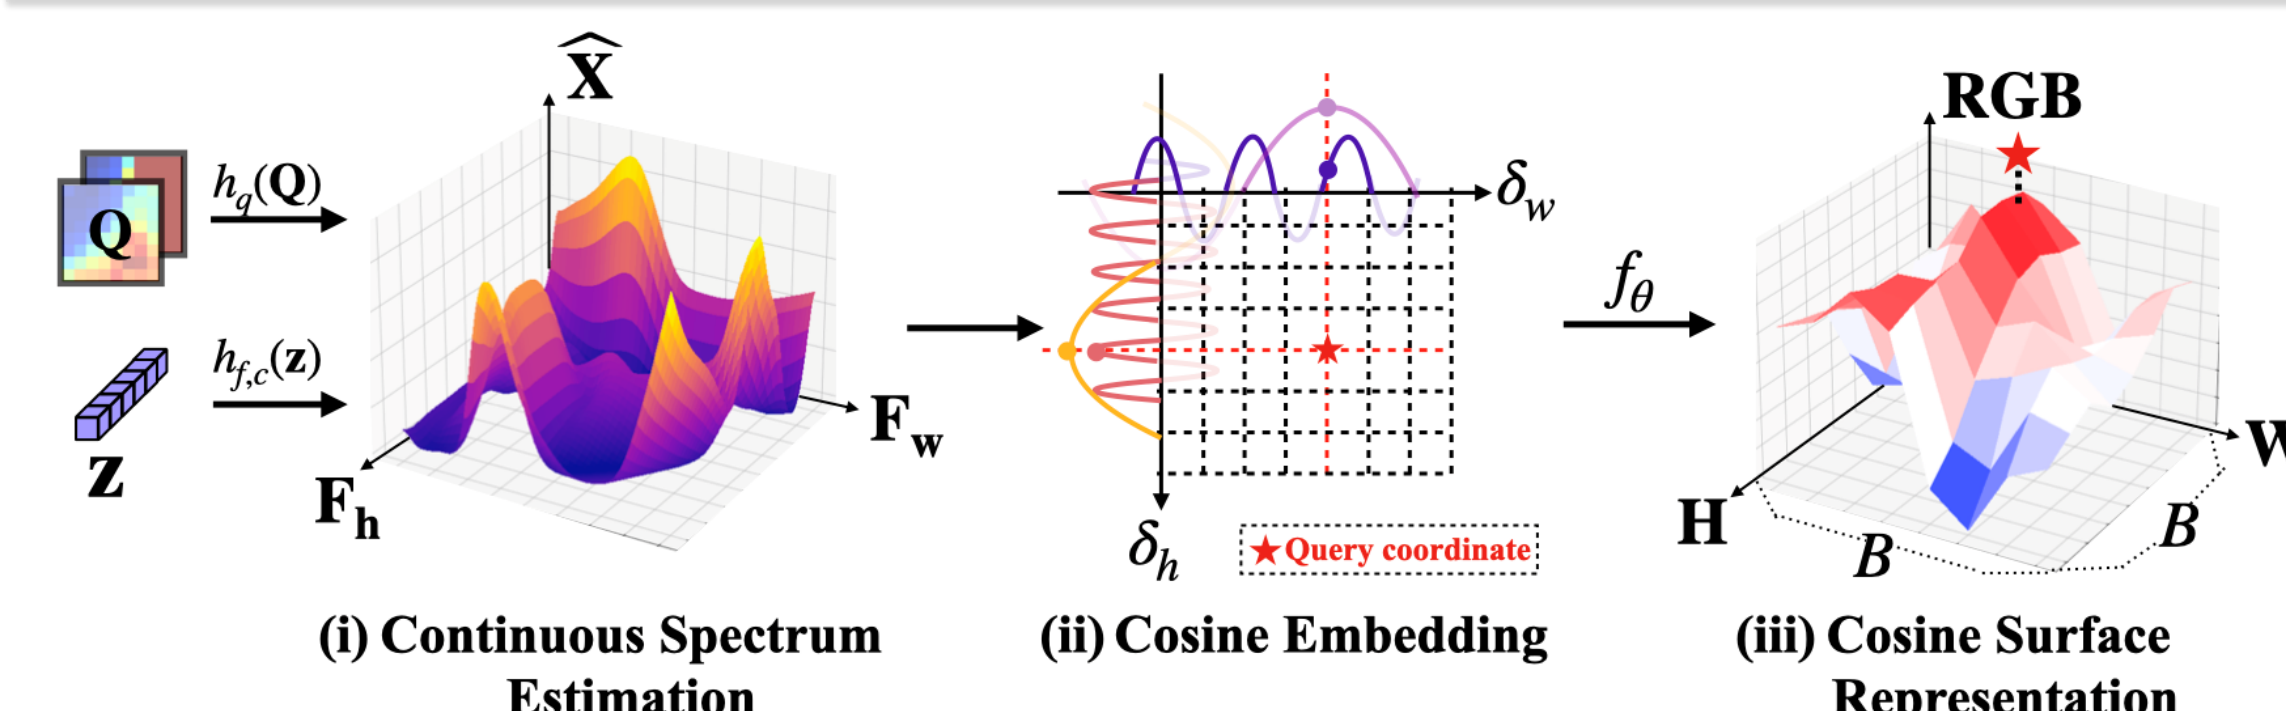

$$I \rightarrow X \rightarrow \hat{I}, \quad I(I; X) \geq I(I; \hat{X}) \quad (\text{Data Processing Inequality})$$

JPEG Encoding

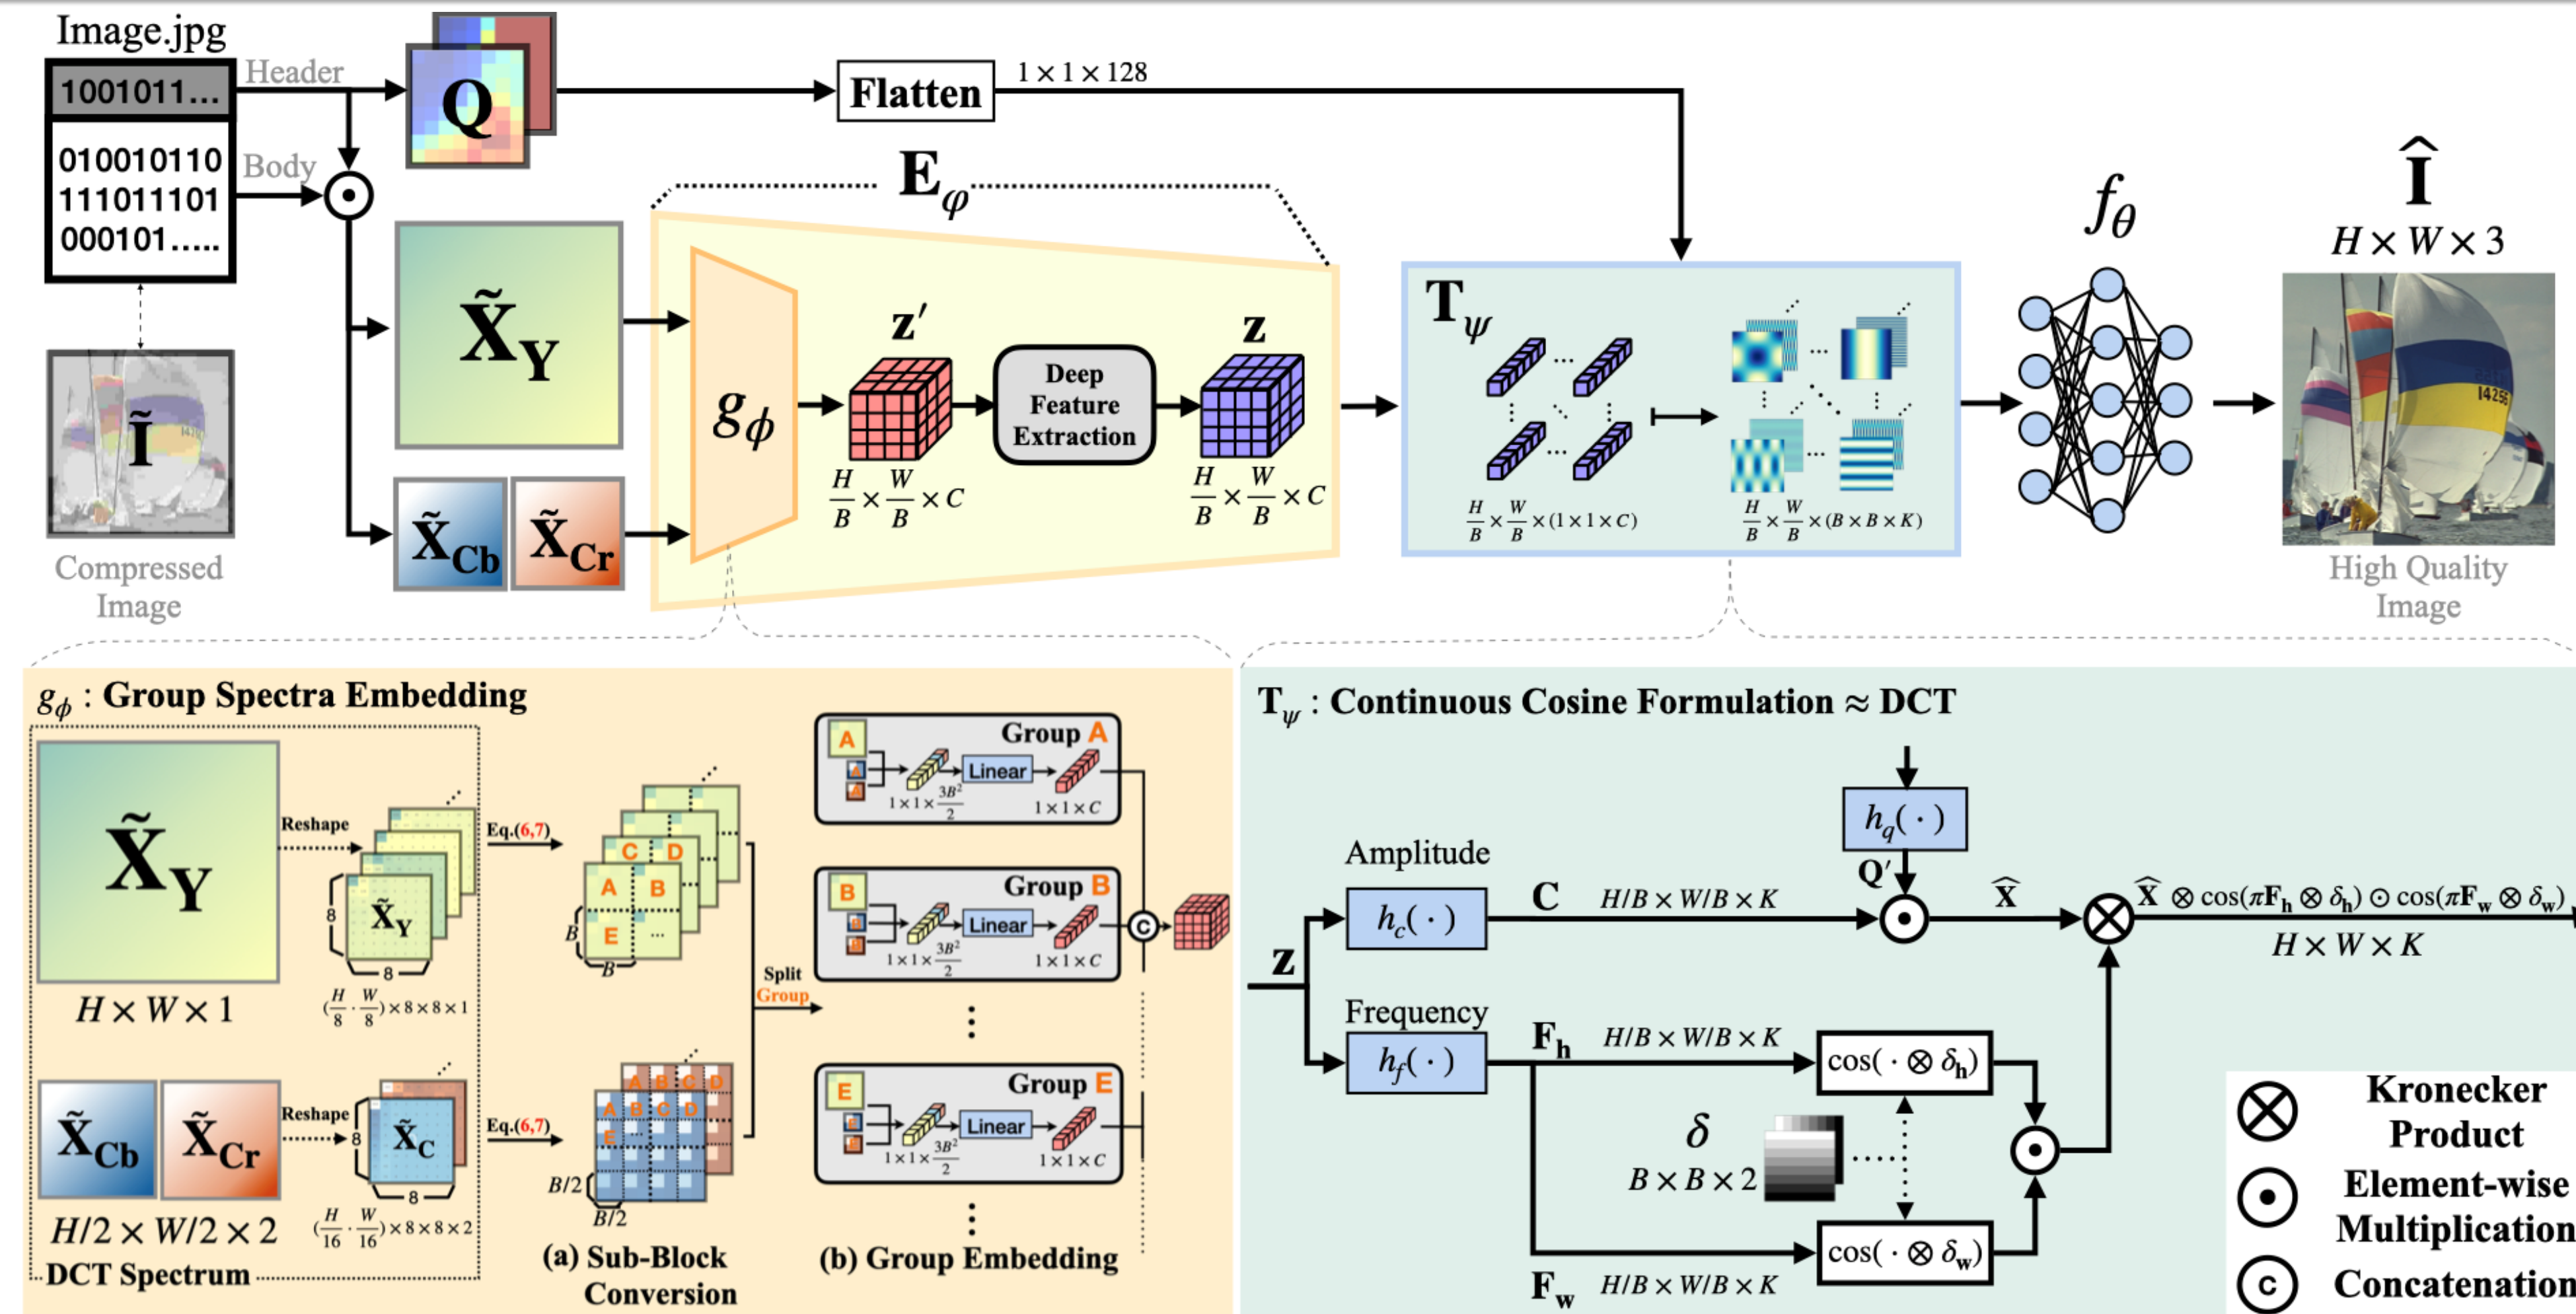

$$\begin{bmatrix} \tilde{I}_Y \\ \tilde{I}_C \end{bmatrix} = \begin{bmatrix} DCT^{-1}(|DCT(I_Y)/Q_Y| \odot Q_Y) \\ DCT^{-1}(|DCT(I_C^{\downarrow})/Q_C| \odot Q_C)^{\uparrow} \end{bmatrix} \quad \text{Quantization \& Downsample}$$

Local Implicit Neural Representation

Method

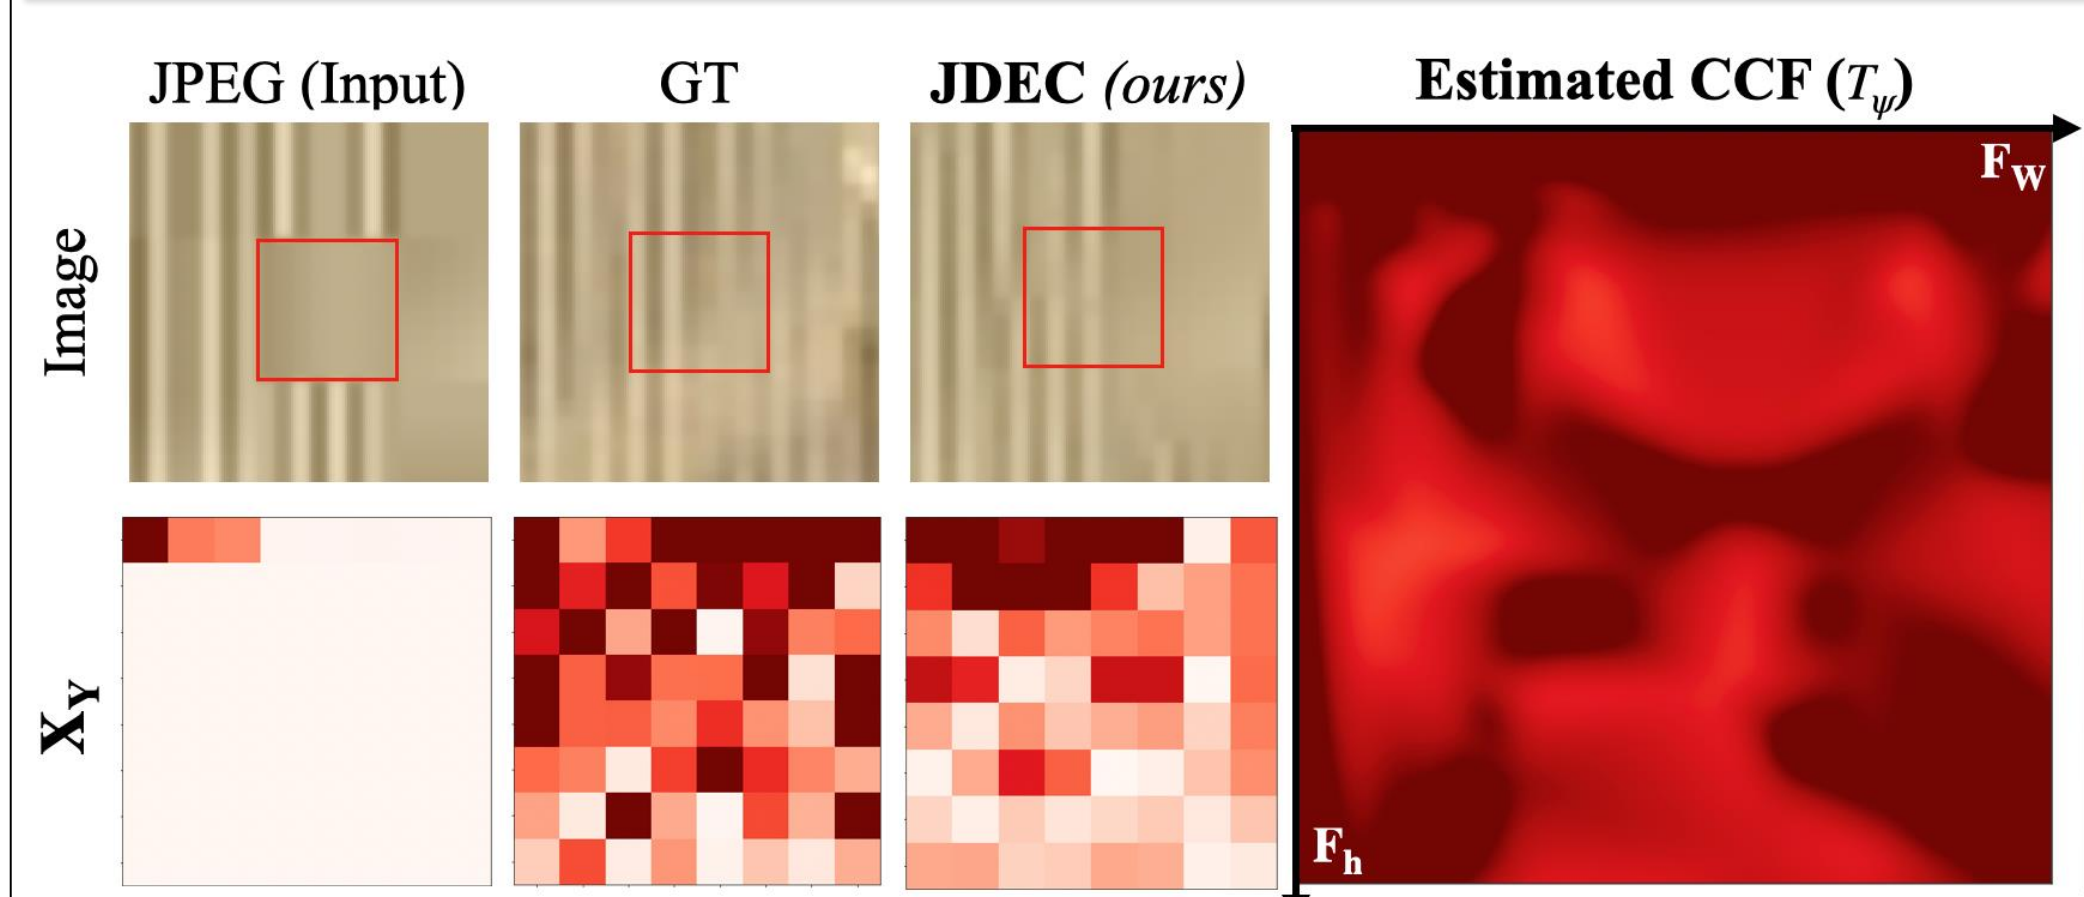

$$\begin{aligned} E_{\phi}: (\tilde{X}_Y; \tilde{X}_C) &\rightarrow z \in \mathbb{R}^{\frac{H}{B} \times \frac{W}{B} \times C} \\ \tilde{X}_Y \in \mathbb{R}^{H \times W \times 1} & \quad \tilde{X}_Y = D_B^* (D^T X_Y D) D_B^{*T} \\ \tilde{X}_C \in \mathbb{R}^{\frac{H}{2} \times \frac{W}{2} \times 2} & \quad \tilde{X}_C = D_{B/2}^* (D^T X_C D) D_{B/2}^{*T} \end{aligned}$$

$$\hat{I} = f_{\theta}(\hat{X} \otimes (\cos(\pi F_h \otimes \delta_h) \odot \cos(\pi F_w \otimes \delta_w)))$$

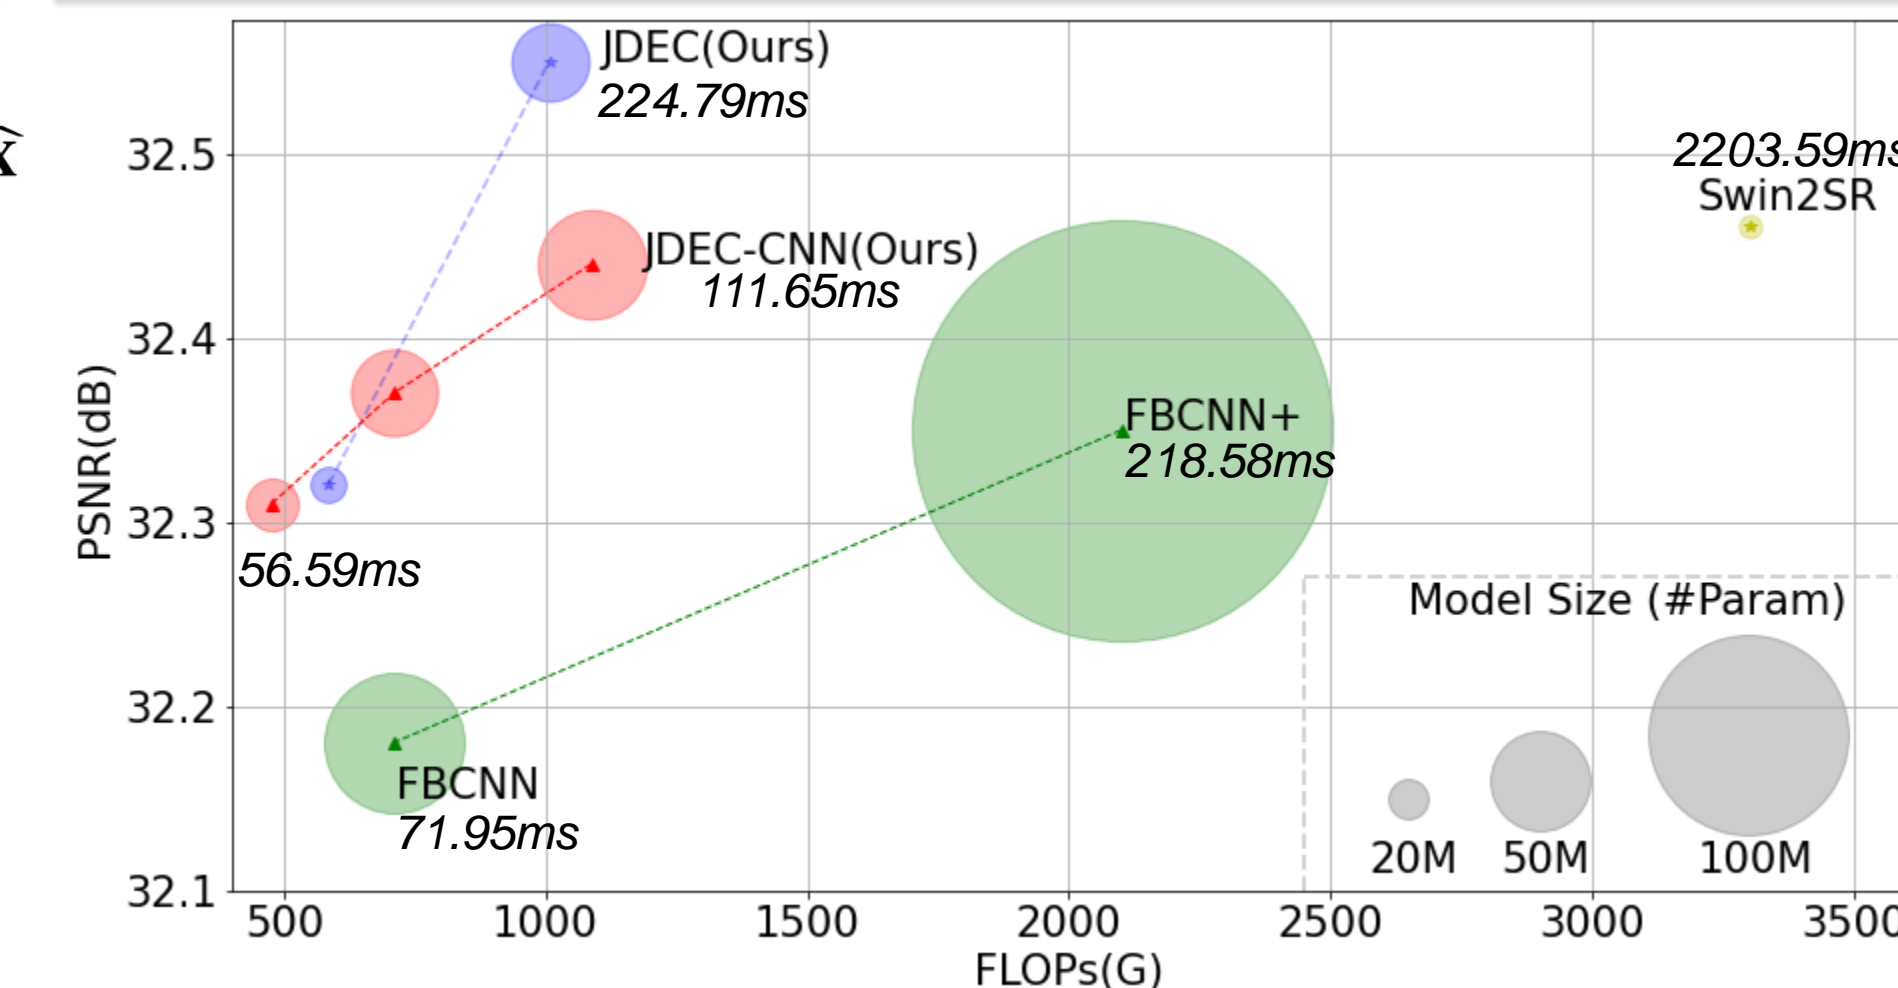

$$I = D^T X D \approx f'_{\theta}(\Lambda_h \hat{X}' \Lambda_w), \quad \hat{X} = C \odot Q' \text{ Amplitude} \quad \Lambda_{h,w} = \cos(\pi F_h \otimes \delta_h) \text{ Continuous basis}$$

Discussion

Learning Continuous Cosine Spectrum

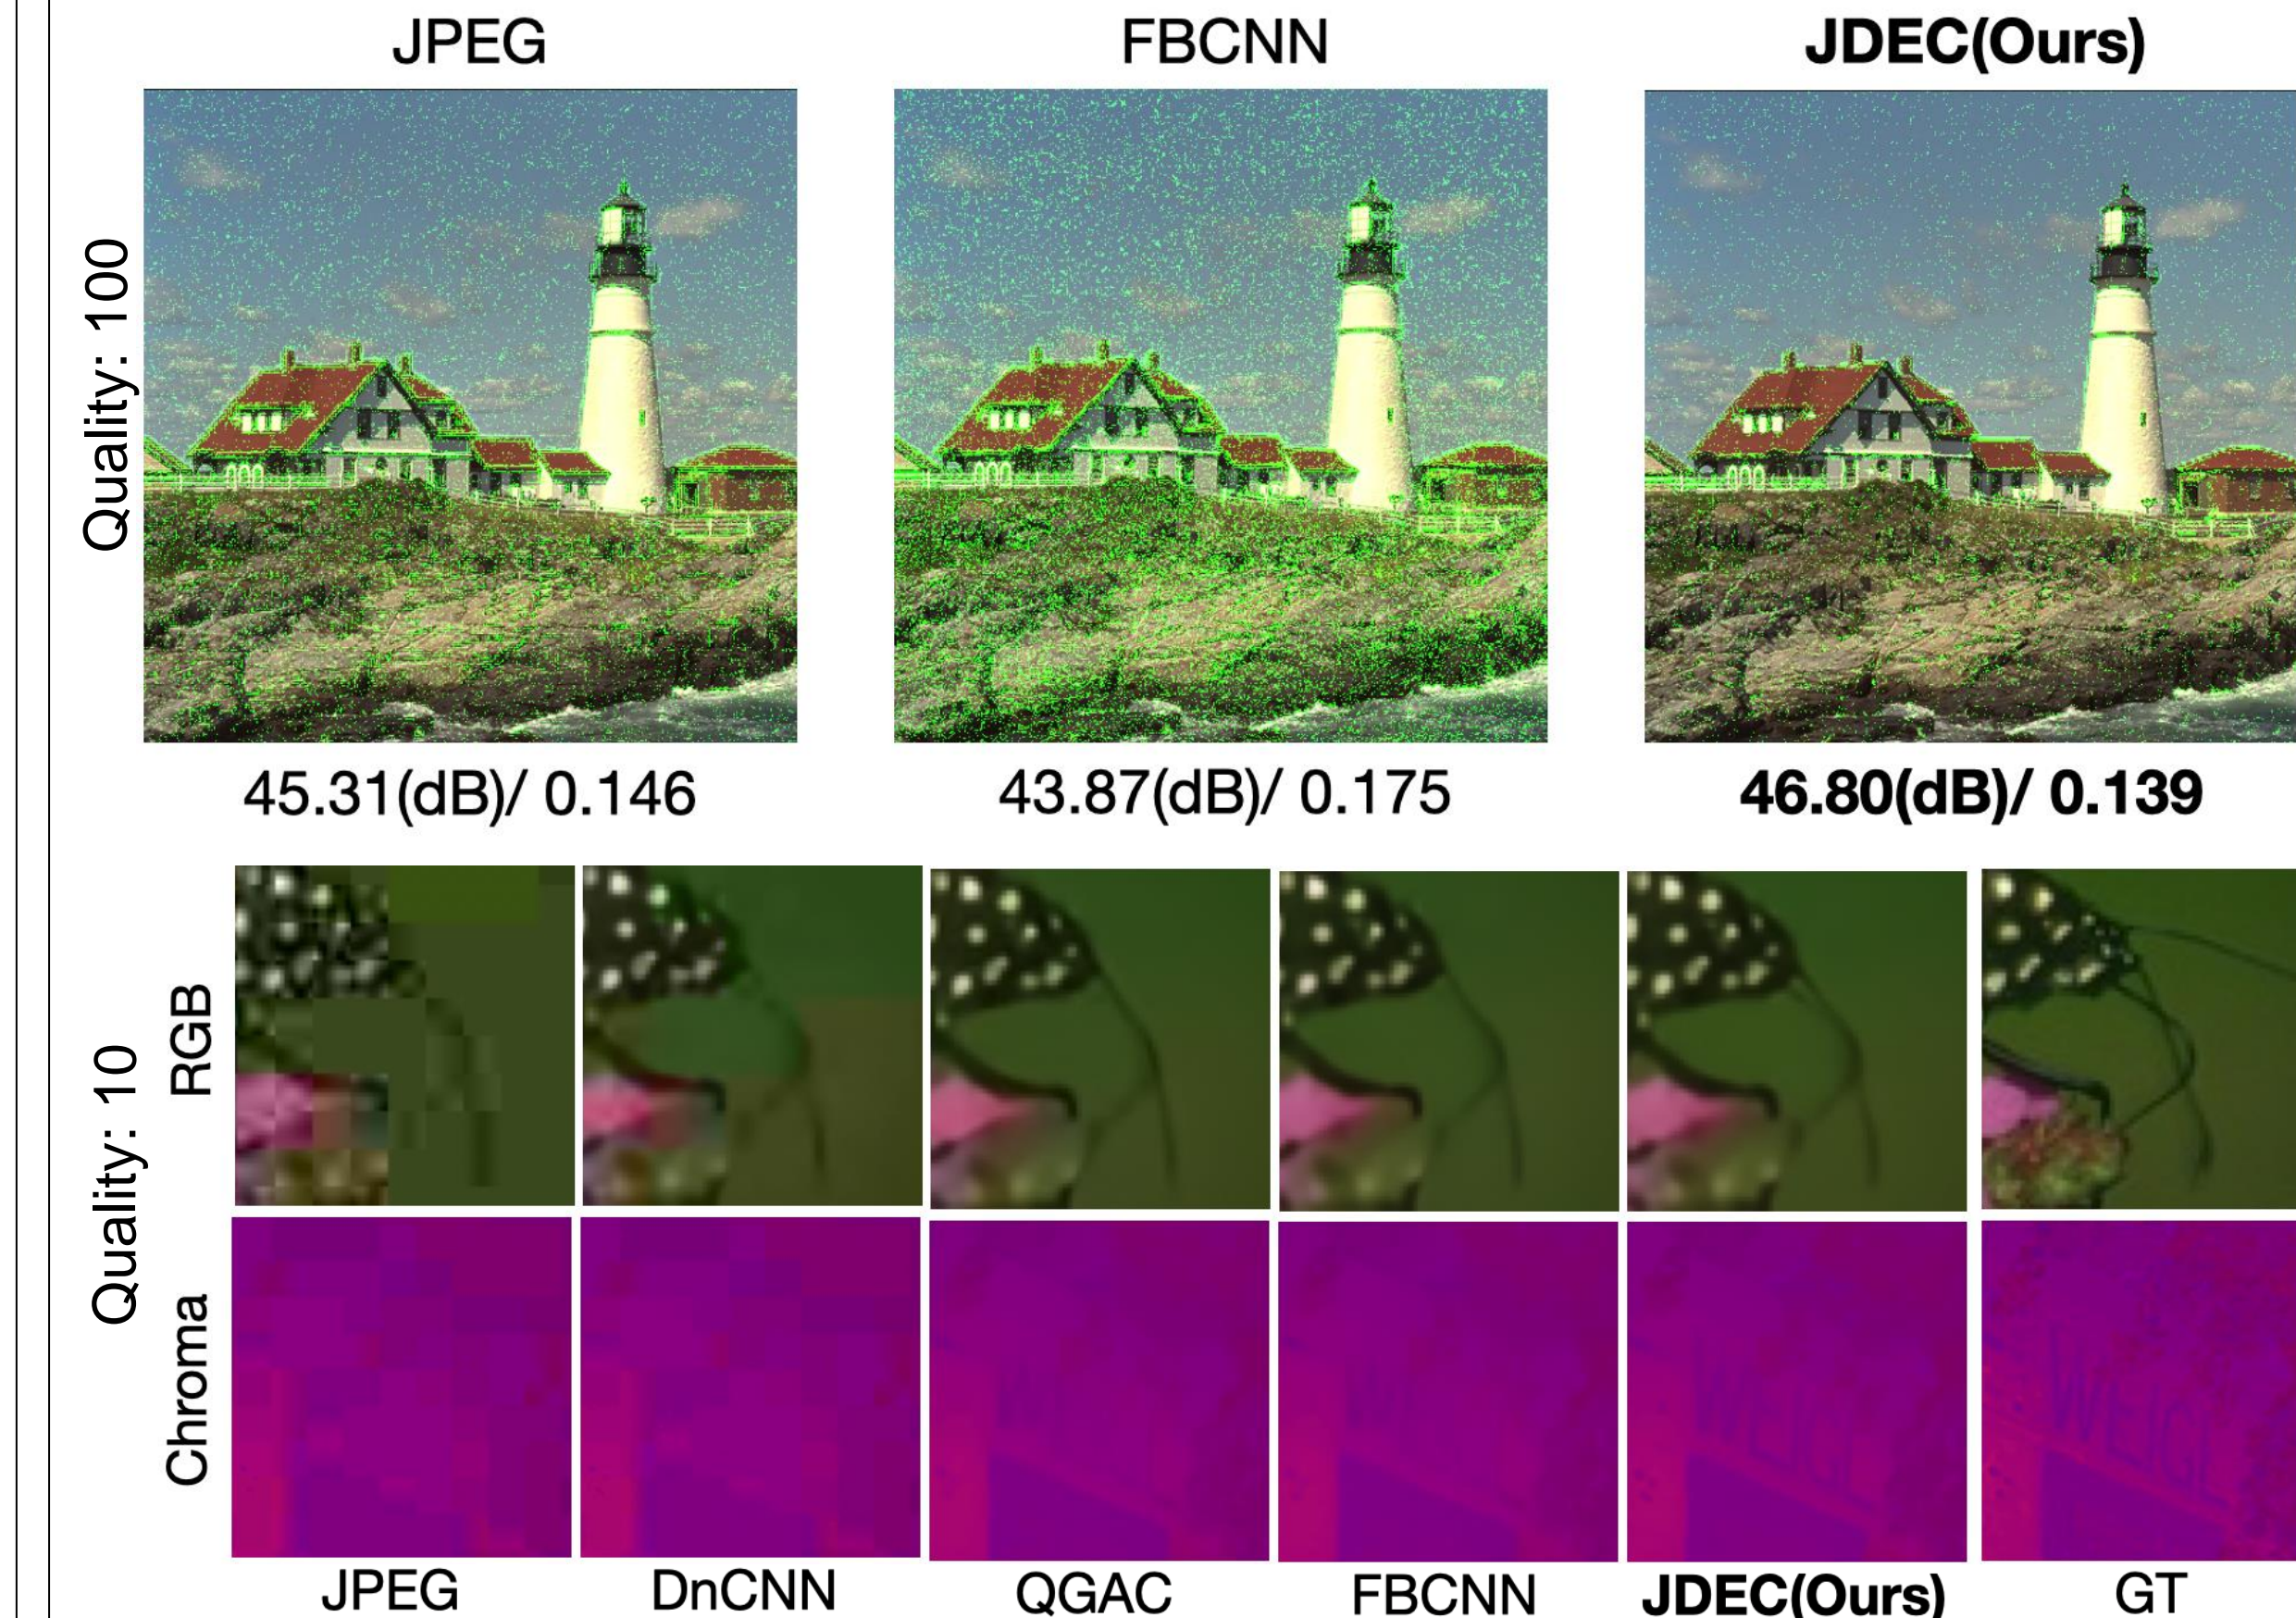

Model Complexity

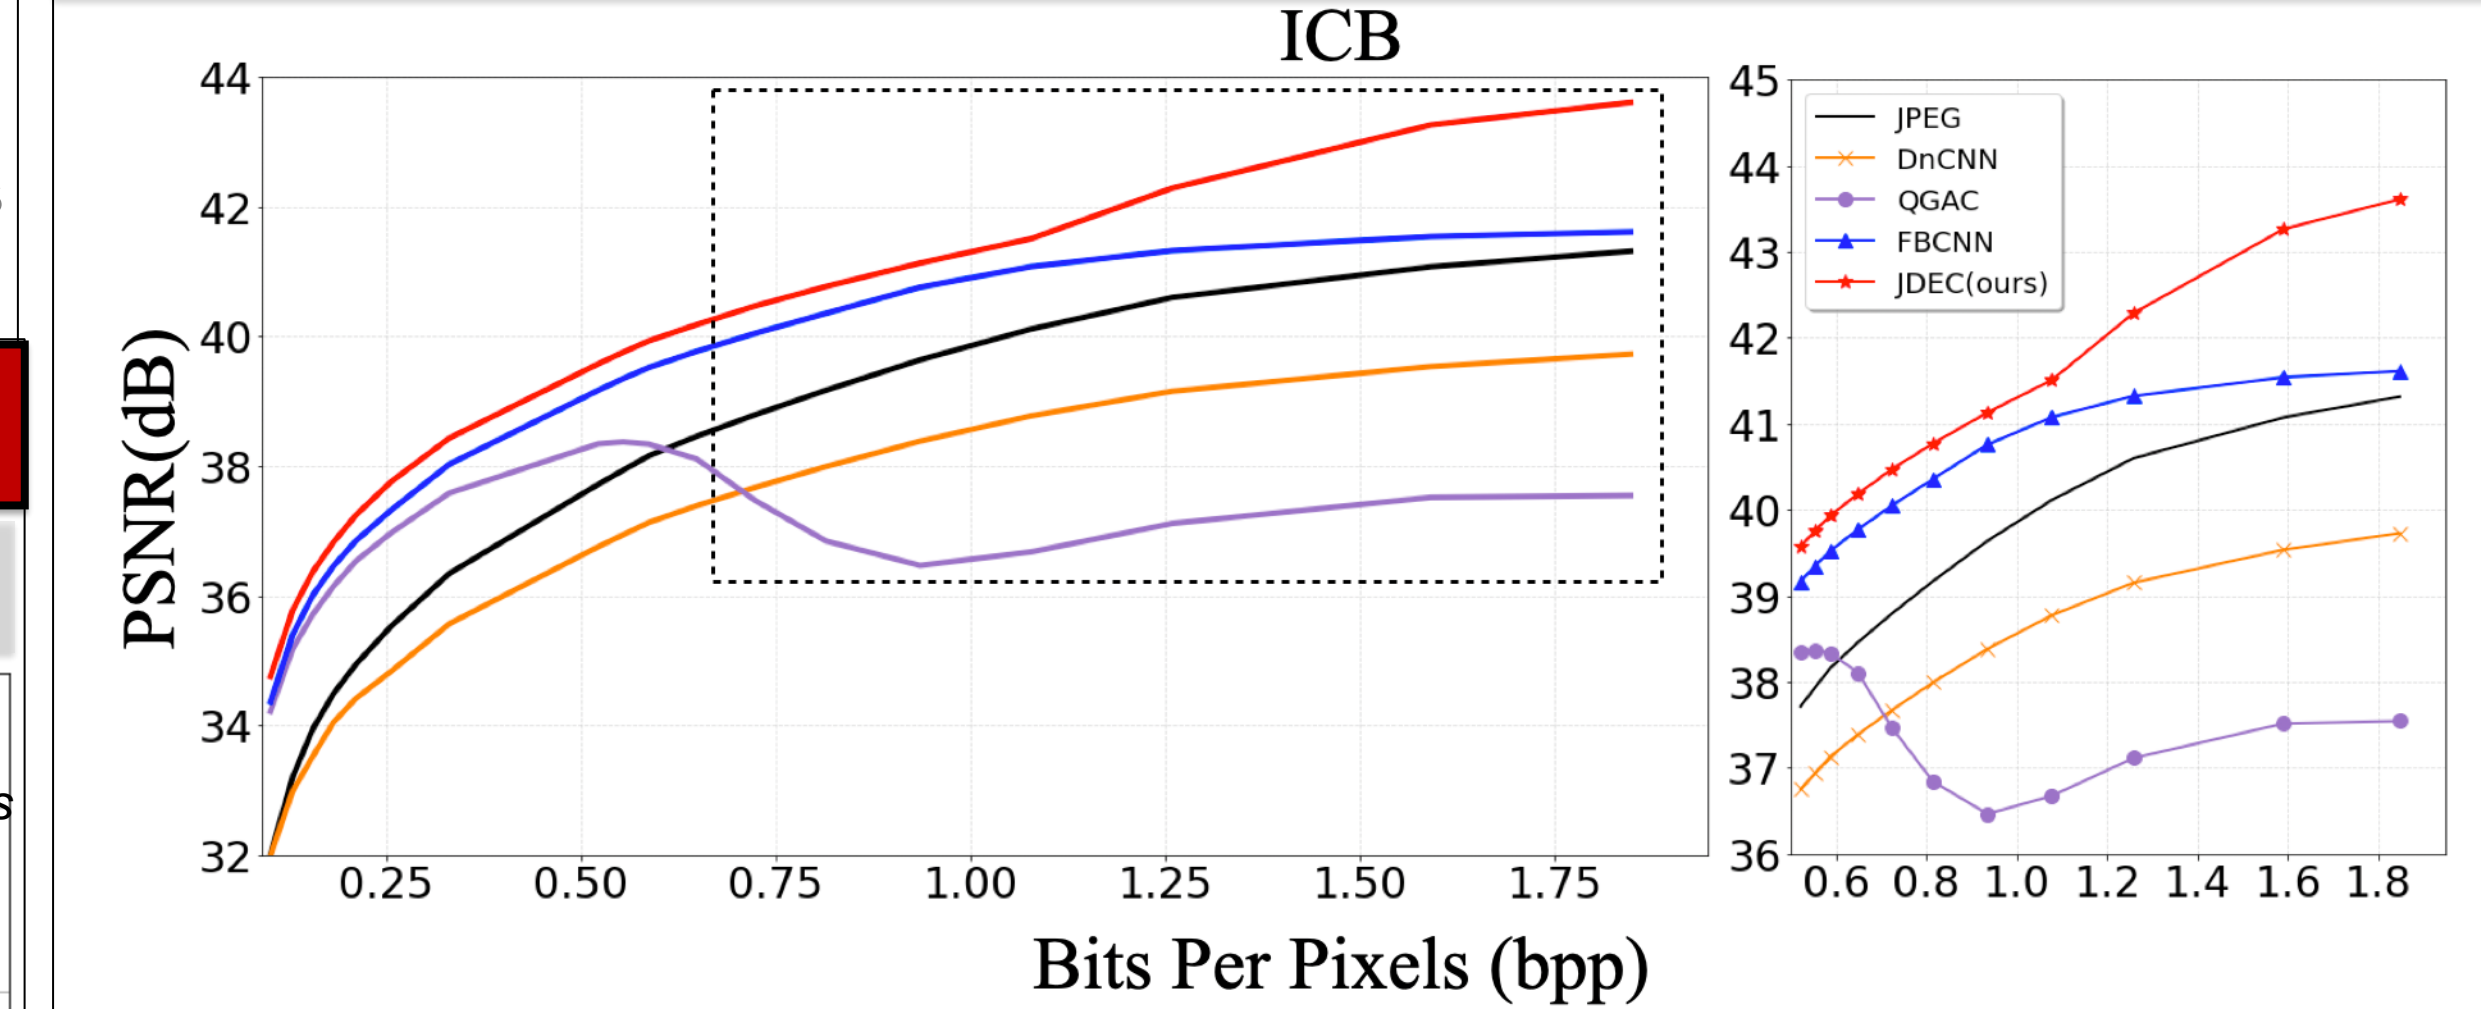

Results

Qualitative Comparison

Quantitative Comparison

Conclusion

Group Spectra Embedding + Continuous Cosine Spectrum INR
 → Decoding JPEG files to the High-Quality Image
